

# GIANT STATUES IN THE MAKING

ARTIST KARL BITTER IN HIS HOBOKEN STUDIO  
WORKING FOR THE ST. LOUIS EXHIBITION

KARL BITTER  
FROM A PAINTING BY W. S. CORWELL

THE WORKSHOP

Under the Palisades of the Hudson River, colossal decorations for the World's Fair are being made—this work is under the direction of Karl Bitter, Chief of the Department of Sculpture of the Louisiana Purchase Exposition—Sixty-Eight Men are Employed and More Than 2,500 Barrels of Plaster of Paris is Now Being Consumed.

WHERE MEN  
ARE FORMED

PLASTER BOYS

Having secured the plaster, the sculptor goes to work upon his figure, laying it on as to cover the main idea in a simple manner. The figure before him is a very slight, to be sure. It has no face or fingers or modeling at all and looks very little like the thing it is intended to represent.

But the coating of plaster changes all that very soon. Referring to the model, the sculptor works patiently on. He reverses the carver's process and begins at the top. The face and arms seem to be the next interesting parts to him and he completes them first.

He models away from morning until night, building up the edge of the drapery, backing away at the burlap and the excelsior, when the men have been careless or when he wishes to change the original sketch for a new bit of modeling which he believes will improve the model, and presently the thing is completed.

It takes about three weeks or a month to make a figure—that is, to make the model and the enlargement.

The enlargement, it seems, with the facilities they have at hand is a simple matter. It alone can be done in a week, while it sometimes takes the sculptor two or three weeks to make the original model.

He usually makes a number of what he calls "sketches," and submits them to Karl Bitter, who decides which translation of the original conception is best. The one selected is then worked up to a finished stage and sent to the "shop" to be used for enlargement.

ASSISTED BY YOUNG SCULPTORS OF THE UNITED STATES.

Mr. Bitter has called to his assistance the younger sculptors of the United States. Some of them have already made their mark and others will be better known when their work is seen at the Louisiana Purchase Exposition.

Karl Bitter, chief of the Department of Sculpture, is an Austrian by birth, but an American by adoption and instinct. He studied his profession in the art schools of Vienna and was graduated from the Academy of Fine Arts.

He came to America in 1888, at the age of 20, and in four years has risen to the front rank in sculpture.

His works are distributed over a good part of the United States, several important objects being in New York, Philadelphia, Pittsburg and Boston.

WRITTEN FOR THE SUNDAY REPUBLIC.

Mention the World's Fair, the Pan-American Exposition, the Paris Exposition or the Charleston Exposition, and immediately, among all the wonders of the world, there comes to the memory of all who have attended any one of the fairs a picture of a fairland composed of electric lights by night and dazzling white buildings flanked on all sides by colossal groups of sculptural art.

How are they made, these figures which, flanking the beautiful buildings and well-laid walks, made men feel like a race of Lilliputians with a hundred Gullivers in their midst?

Under the Palisades near Union Hill, in Hoboken, are making the colossal decorations for the St. Louis World's Fair. The work is under the direction of Karl Bitter, the man who had charge of the department of sculpture of the Pan-American Exposition, and who is now the chief of the Department of Sculpture of the Louisiana Purchase Exposition.

The workshop is an old roundhouse belonging to the Erie Railroad. In this building, which is admirably adapted to the purpose, because of the girders in the roof for holding the glass figures and the tracks which enter the building for the transportation of the finished product to St. Louis, almost all of the statues will be made.

Roughly estimated, there will be about 80 groups, including fountains, monuments and single figures.

Work started last February and the contract calls for the statues to be finished and on the Fair grounds about one year from now.

More than 2,500 barrels of plaster of paris will be consumed in the construction of them, sixty-eight men are employed—carpenters, painters and plaster boys, not to mention some fifteen sculptors in and about New York City who have been deputized to model certain features.

HOW THE STATUES ARE MADE.

The question is, How are the statues made? On account of their size it is difficult to imagine an artist capable of modeling a figure of such giant proportions with any accuracy.

They are too big for the eye to take in except at a great distance, and, in truth, no sculptor attempts to work an original on anything like the generous scale of the final figure.

The first thing they do after the "inspiration and conception" of the idea, the statue is intended to convey is to make a small model in green clay.

It may vary in size from two to three feet high. When it is finished a plaster of paris replica is made of it and sent from the studio of the sculptor to the roundhouse under the hill on the other side of the Hudson.

Then it comes under the charge of Gustav A. Gerlach, the superintendent of the building.

He is a veteran in his line of work, having occupied the same position under Karl Bitter for the Pan-American Exposition.

In the shop where the statues are made the little model is cut in two or three pieces.

The enlargement is going to be great. It is cut into three pieces; if small, the whole model is used direct.

The actual enlargement is done mechanically by a device called a "pneumograph," or "pneumograph," named from two points from which the men work.

The machine consists primarily of two vertical posts set about twelve feet apart. They have a cogwheel at the top connected by a roller chain, like a bicycle chain.

They rest on the floor on a pivot, so that when you turn one post the other turns also. The model, or that section of it which is to be enlarged, is securely fastened to one of these posts midway between the ceiling and the floor.

The enlarged statue is to appear against the other post.

Suspended from the roof, midway between the two posts, is a horizontal bar. At both ends of this bar, protruding at right angles to a distance of a foot and a half, are two other bars, ending in sharp points like needles.

By a system of weights and balances this bar is so worked that when the needle point is placed against the model attached to one post the other needle point, at the far end of the bar will register on the enlargement a similar spot.

The device works on the same principle as the pantograph used by artists in enlarging drawings, and was invented and adapted for enlarging models by Robert T. Paine, one of Mr. Bitter's assistants.

Mr. Bitter's fond in his praise of it, saying: "It secures for us exactness and speed in reproduction that would otherwise be difficult, if not impossible, to obtain."

TWO PARTS ALWAYS FIT WHEN REASSEMBLED.

There is no doubt about its exactness, for so well does it work that when the first half of the enlarged figure is finished and set to one side, and the second half also completed in its turn, and the two parts are re-assembled, it is found that they invariably fit to perfection.

So that when the top coat of plaster of paris is placed over the joint no one would ever be able to detect the fact that the figure had been made in two parts.

But to revert to the pointing machine. When the needles have been adjusted until they point to the right places the carpenter is called in. He usually starts at the base and builds up.

The man at the model end of the machine points to the lowest part of the pedestal; the needle on the other end shows where it should begin and the carpenter lays down his board at that spot.

Then he goes to the other end of his board and the man with the pointing machine moves his needle over to the other end of the pedestal and the carpenter knows just where to saw his board.

If the model is that of a figure sitting in a chair on top of a pyramid, the carpenter builds up his steps and fashions the wooden upright supports for the chair, being careful to pin the whole fabric of woodwork together by means of a long 2x2 piece of lumber running vertically through the center of the figure and coming out of the top of the head for a distance of a foot or so.

In this upright piece of lumber he bores a large hole, so that a rope or chain can be passed through it when the figure is completed and needs must be lifted into the air and laid down to be placed in position on the fair grounds this timber is removed with a saw, so that nothing of the woodwork is seen; but if one could get up above the figure and look down upon all the statues with a strong lens glass one could see the end of this wood embedded in the head of each statue.

As all the figures are placed so high up that she did not love me, had never loved me, she did not love me, had never loved me, she did not love me, had never loved me.

And then, again, if by any chance any of the casts are so situated as to be seen from the top, the blemish is easily covered over with a little plaster of paris.

But right here, at the very beginning of the process, that beam is put into place. After the carpenter has done his work, and the frame is finished, the "burlap, wire and excelsior" man appears upon the scene, for these giant figures are built up from the inside out like a rag doll or a baseball.

LEGS WRAPPED WITH EXCELSIOR AND BURLAP.

Truly, like human beings, they are "fearfully and wonderfully made." The "burlap man" wraps the statue the carpenter meant for the legs and arms of the figure with a mixture of excelsior, plaster of paris and burlap until they take a sort of resemblance to their final form, and all the time he is working the "pointing man" is busy with the needle, indicating the spots to see that the growing figure remains an inch or so under the final size.

When this operation is finished and hardened, the finishing touch is given, and this consists of a hammer and nails.

The "pointing man" puts the needle against the chin, forehead, eye, back hair, arms, waist, legs, etc., of this little model, and each time the man with the hammer drives a wire nail half way into the figure.

As his fellow at the other end brings his needle to a point of rest against the model he at the other needle finds that there is a distance of an inch or so between the excelsior burlap figure and his needle, and so he proceeds to fill up the distance by driving a nail just deep enough for the needle in passing barely to touch the top of it.

When they get through with the enlargement it looks as though it might be intended for the big white ghost of a short-haired porcupine.

But the nails have their purpose; they show the nails which finally covers the outside with its coating of plaster of paris how thickly he must lay on the white stuff. The nails being driven, and the result of the work having been examined and verified by the superintendent, the half-finished enlargement is taken down and placed upon a sculptor's table.

Some of the sculptors do their own work upon the enlargements, but usually an assistant is entrusted with it.

However, the figure is an important one and the sculptor does his own work, only he works in cement instead of plaster of paris. But whether the assistant or the sculptor himself does the work, the process is the same.

The enlargement is wheeled to that part of the building where there is the best light and the sculptor sets up a ery for "plaster" at the top of his lungs.

ITALIAN BOY COVERED WITH WHITE PLASTER.

Presently, with all the hesitation of a messenger boy, there appears from somewhere in the heart of the building a plump Italian boy, covered with a coating of white plaster from head to foot. In his hands he is bearing a tin dish full of the stuff.

It is swimming with water, and he carries it for all the world as though it might be soup, but he leaves a trail of white to mark the way he came.

There are five or six of these boys kept continually busy answering the cry for plaster which comes from the throats of the sculptors at work at one time on as many different pieces of statues towering above them.

part; and in a little time the hush of the solitude laid fast hold of us, scanty use of speech and bidding us go softly, and after this the march became a soundless shadow-fitting, and we a straggling file of voiceless mechanisms wound up and set to measure off the miles till famine or exhaustion should thrust a finger in among the wheels and bid them stop forever.

This was the loom on which we were the backward-reaching web of strenuous oppression. But through that web the scarlet thread of famine shuddered in and out, and hunger came and marched with us till all the days and nights were filled with craving, and we reeked little of fair skies or dripping clouds, or aught besides save this ever-present specter of starvation.

You will not think it strange that I should have but dim and misty memories of this time. Of all privations famine's keenest blunts the senses, making a man oblivious of all save that which drives him onward. The happenings that I remember clearest are those which turned upon some temporary bridling of the hunger pangs. One was Yeates's killing of a milk doe which, with her fawn, ran across our path when we had fasted two whole days.

By this, a capital crime in any hunter's code, you may guess how cruelly we were starved in the hunger vice. Also, I remember this: as if to mock us all the glades and openings on the hillsides were thickened with pine-trees. And in that forest of the crooked windings of some wandering mountain stream through thickets where, you would think, no woman-ridden horse could penetrate.

One day the sun would shine resplendent and all the columned distances would be green and gold, with here and there a dusky flame where the sweet-gum heralded the autumn, whilst overhead the leafy arches were fine-lined traceries and arabesques against the blue. But in the night, mayhap, a dismal rain would come, chill with the breath of the nearing mountains; and then the trees turned into dripping sprinkling-pots to drench us where we lay, sodden already with the heaviness of exhaustion.

Since the hasty pursuit was a thing to tap the very fountain-head of fortitude and endurance, we faced on silent for the better part, and in a little time the hush of the solitude laid fast hold of us, scanty use of speech and bidding us go softly, and after this the march became a soundless shadow-fitting, and we a straggling file of voiceless mechanisms wound up and set to measure off the miles till famine or exhaustion should thrust a finger in among the wheels and bid them stop forever.

CHAPTER XXI.

How We Kept Lenten Vigils in Tristram.

"Two weeks you beyond the limit of good-nature were I to try to picture out at large the varied haps and hazards of our wanderings in the savage wilderness. For the actors in any play the trivial details have their place and meaning momentous enough, it may be; yet these are often wearisome to the box or stall yawning impatiently for the climax.

If, if you please, you are to conceive us four, the strangest ill-assorted company on the footstool, pushing on from day to day denser and ever deeper into the palfins forest solitude, yet always with the plain-marked trail to guide us.

At times the march measured a full day's length, and the columned miles of the forest temple through lush green glades dank and steaming in the August heat, or over hill-sides alpey with the fallen leaves of the pine-trees. And in that forest of the crooked windings of some wandering mountain stream through thickets where, you would think, no woman-ridden horse could penetrate.

One day the sun would shine resplendent and all the columned distances would be green and gold, with here and there a dusky flame where the sweet-gum heralded the autumn, whilst overhead the leafy arches were fine-lined traceries and arabesques against the blue. But in the night, mayhap, a dismal rain would come, chill with the breath of the nearing mountains; and then the trees turned into dripping sprinkling-pots to drench us where we lay, sodden already with the heaviness of exhaustion.

Since the hasty pursuit was a thing to tap the very fountain-head of fortitude and endurance, we faced on silent for the better part, and in a little time the hush of the solitude laid fast hold of us, scanty use of speech and bidding us go softly, and after this the march became a soundless shadow-fitting, and we a straggling file of voiceless mechanisms wound up and set to measure off the miles till famine or exhaustion should thrust a finger in among the wheels and bid them stop forever.

This was the loom on which we were the backward-reaching web of strenuous oppression. But through that web the scarlet thread of famine shuddered in and out, and hunger came and marched with us till all the days and nights were filled with craving, and we reeked little of fair skies or dripping clouds, or aught besides save this ever-present specter of starvation.

And in that forest of the crooked windings of some wandering mountain stream through thickets where, you would think, no woman-ridden horse could penetrate.

## THE MASTER OF APPEAL: BY FRANCIS LYND.

SYNOPSIS OF PRECEDING CHAPTERS.

Roger Irwin was arrested in 1781 by Governor Tyrone for his participation in the Regulator movement, and his Carolina estate, Appleby Hundred, bestowed upon one Gilbert Star, a friend of John Irwin, having till then served the King in a regiment in England, threw up his commission and took service with the Americans. In 1773 he returned to the New World to see, if in the wondrous days of revolution, he could not regain his ancestral estate.

Almost the first man he meets is Sir Francis Falconet, an old enemy of his English family, now a Captain of Heralds. The two fight a duel, in which Sir Francis wounds Irwin, taking an unfair advantage of the intervention of Margery Star, the daughter of the usurper Appleby, whether Irwin is taken by her orders, she pursues him, and he falls in love with her, honor bidding him to respect what he believes to be the prior claim of a young American, Dick Jenner. She also tells him that Sir Francis Falconet has asked her to marry him, a marriage that he purposes to prevent.

For long he discovers that he is in reality the prisoner of the Baronet, who intends to denounce him to Tarleton as a Continental spy. He also learns that a powder convey is to be sent out to arm the Indians for raids upon the patriots. While trying to escape with the map of the route of this convey, he is captured. Tarleton condemns him to death, and during the night before his execution Margery Star, who endures a sea-sickness with the mistress of Irwin, who boldly declares that she is his wife, Gilbert Star, knowing that he is about to die, demands a secret marriage, as this will secure Appleby for his daughter independent of his confederate claims.

Irwin is led out to execution, but saved at the last moment by a band of patriots. Unconscious, his Indian playmate of boyhood days, informs him that Jenner, too, has escaped. Irwin chances to find Jenner surrounded by enemies. He rescues Jenner and the two engage in a series of adventures.

They return to Appleby Hundred, where new powers await them.

Margery Star is taken prisoner by the Indians and sold into slavery out to India.

Chapter XX—Continued.

"And yet that ain't all. Whilst some of the Indians was a-whoooping it up across the creek, a-chasing the folks that was making tracks for their city o' refuge, t'others run the two gals off into the big woods at the side o' the road. Then Mister

Hoss-Captain picks up the Afrikin, chuckin' him on a horse and sends him a-kittin' with his flea in his ear; after which he climbs his horse and makes tracks himself—not to be ketch-up with the gals, er you might reckon, but off on yon way," pointing across the creek and down the road to the southward.

Jenner took time to make a careful scrutiny of the train, measuring the stride of the horses, and looking sharply on the briars for some bit of cloth or other token of assurance. When we came up with him he was mumbling to himself:

"Um-hm; jes so. They was a-making tracks along hereaway; sartain, sure; lar-ken; but sooner. Then he turned upon me. 'Cap'n John, can't you and the youngster lay your heads side and side and make out what all this here Hoss-Captain might be up to? It do look like he had some sort o' hatchet to grind against that Afrikin back to raise a hue and cry, and then a-tellin' his Injuns leave a trail like this here that any tow-head boy from the settlements could follow at a canter.'"

Richard said he could never guess the meaning of it all; and my mind was to be fully as blank as his. I made sure some deep-laid plot was at the bottom of the mystery; but we had measured many weary miles in the wilderness, and the plotter's trap had been fairly baited, set and sprung, before the lightning flash of explanation came to show us all its devilish ingenuity.

But now "Forward" was the word, and we fell in line again, and again the tireless running of the two guides stretched and held us on the rack of weariness. Happily for us two who were out of training, the rainy-day dusk came early; and though Yeates and the Indian, running now with their bodies bent double and their noses to the ground, held on long after Richard Jenner and I were battling for any seeing of the hoof-prints, the end came at length and we divoucked as we were, fitless, and

with the last of the cooked ration of deer's meat for a scanty supper.

After the meal, which was swallowed hastily in the silence of utter fatigue, as scooped a hollow in a last year's leaf and lay down to sleep, wet to the skin as any four half-drowned water rats, and to the full as miserable.

Passed as I was a long time before sleep came to make me forget; a weary interval fraught with dismal mental miseries to march step and step with the treadmill rackings of the self, and what a relief when the word of her message, hungering avidly for some hint to give me leave to claim it for my own. Though I made sure she did not love me, had never loved me, she did not love me, had never loved me, she did not love me, had never loved me.

With this, I fell to dwelling afresh upon the wording of her message, hungering avidly for some hint to give me leave to claim it for my own. Though I made sure she did not love me, had never loved me, she did not love me, had never loved me, she did not love me, had never loved me.

Was it the one to whom her message had been sent? Suddenly I remembered what Richard had said; that the arrow was the Catawba's. If Uncatowa were the bearer of the parchment, he would surely know to whom he had sent.

His burrow in the leaf bed changed to be next to mine, and I could hear his steady breathing, light and long-drawn, like that of some wild creature—a true, he was sleeping with all the senses alert to spring awake at a touch or the snapping of a twig. I thought of all this, and yet, when I would have wakened the Indian, a shivering aque-fit of portwine cock-crow gave me no pause. For while the doubt remained there was a chance to hope that she had sent to me, making the little cry for help a token, not of love, perchance, but of some downwarding of forgiveness for my desperate wronging of her. And in that hesitant moment it was borne in upon me that without this slender chance for hope I should go mad and become a wretched wailing at a time

When every faculty should be superhuman sharp and strong for spending in her service.

forebore to wake the Indian, and following out this thought of service fitness, would force myself to go to sleep and so to gather fresh strength for the new day's measure.

CHAPTER XXI.

How We Kept Lenten Vigils in Tristram.

part; and in a little time the hush of the solitude laid fast hold of us, scanty use of speech and bidding us go softly, and after this the march became a soundless shadow-fitting, and we a straggling file of voiceless mechanisms wound up and set to measure off the miles till famine or exhaustion should thrust a finger in among the wheels and bid them stop forever.

This was the loom on which we were the backward-reaching web of strenuous oppression. But through that web the scarlet thread of famine shuddered in and out, and hunger came and marched with us till all the days and nights were filled with craving, and we reeked little of fair skies or dripping clouds, or aught besides save this ever-present specter of starvation.

You will not think it strange that I should have but dim and misty memories of this time. Of all privations famine's keenest blunts the senses, making a man oblivious of all save that which drives him onward. The happenings that I remember clearest are those which turned upon some temporary bridling of the hunger pangs. One was Yeates's killing of a milk doe which, with her fawn, ran across our path when we had fasted two whole days.

By this, a capital crime in any hunter's code, you may guess how cruelly we were starved in the hunger vice. Also, I remember this: as if to mock us all the glades and openings on the hillsides were thickened with pine-trees. And in that forest of the crooked windings of some wandering mountain stream through thickets where, you would think, no woman-ridden horse could penetrate.

One day the sun would shine resplendent and all the columned distances would be green and gold, with here and there a dusky flame where the sweet-gum heralded the autumn, whilst overhead the leafy arches were fine-lined traceries and arabesques against the blue. But in the night, mayhap, a dismal rain would come, chill with the breath of the nearing mountains; and then the trees turned into dripping sprinkling-pots to drench us where we lay, sodden already with the heaviness of exhaustion.

better marksmen, and now and then some bird or squirrel or rabbit striking on its form came to the pot, though never enough of all or any to more than sharpen the famished edge of a year.

For all the sharp privations of the forest march there was no hint on any lip of turning back. With Margery's desperate need to keep us to the unflinching pitch Richard and I would go on while there was strength to set one foot before the other. But for the old borderer and the fire of perseverance. None the less, these two did more than second us; they set the strenuous pace and held us to it; plaining; the old hunter no whit less tireless and enduring. At this far-distant day I can close my eyes and see the gaunt, striding on always in the lead, and ever pressing forward, tough, wiry and iron-endured, and yet withal so elastic that the make him rebound and strike the harder. Good stuff and there was in that old man; and had Richard or I been less decaused which was not his own would have shamed us into following where he led.

We had been ten days in this starving wilderness, driving onward at the pace that kills and making the most of every hour of daylight, before Yeates and the Indian began to give us hope that we were finally moving in upon our quarry.

The dragging length of the chase grew upon two conditions. From the beginning the kidnapers were able to increase their rowing from the nights; also, they were doubtless well provisioned, and they had horses for the captives and their impedimenta. But as for us, we could follow only while the daylight let us see the trail; and, though we ran well at first, the lack of proper food soon took toll of speed.

TO BE CONTINUED.
